**IW** Innovation Ways

CHAPTER 01

# Executive Summary

## CHAPTER 01

# Executive Summary

---

**BLUF:** Innovation Ways can become a provider of EU AI Act compliance services by landing SME clients on the imminent Article 50 transparency deadline, expanding them into high-risk programs for 2027, and converting them to managed-compliance retainers — leveraging IW AI Core, which already generates the exact artifacts the Act demands, to undercut incumbents on cost.

The EU AI Act compliance market is large and fast-growing — roughly **€609M in 2026** for AI-Act-specific solutions, on a **~37% CAGR** toward €10B+ by 2035 (broader estimates reach €17–38B), though estimates vary ~10× by scope [MEDIUM]. The enforcement schedule is an **urgency ladder, not one cliff**: Article 50 transparency is live **2 Aug 2026** (immediate, broad demand) and high-risk obligations follow in **Dec 2027 / Aug 2028** (high-value) [HIGH]. The incumbents (Credo AI, Holistic AI, OneTrust, IBM watsonx) are all **enterprise-priced (€40–300K+/yr)**, leaving the **SME segment — where 60%+ of European firms haven't started — structurally underserved** [HIGH]. IW's defensible edge: **IW AI Core already produces exactly the artifacts the Act demands** (technical documentation, evidence/audit trails, test/quality-gate reports, diagrams), so IW can deliver **automation-first managed compliance at 40–70% below Big-4 cost** [HIGH]. The recommended play is **land with Article 50 readiness now → expand into high-risk programs for 2027 → convert to managed-compliance retainers (ARR)**, with a ~€2.7M Year-2 run-rate illustration [MEDIUM].

---

**IW** Innovation Ways

CHAPTER 02

# Introduction

## CHAPTER 02

# Introduction

---

This is document 4 of the EU AI Act Compliance Suite, and the commercial counterpart to the regulatory content in [R-00154–R-00156](#). Innovation Ways wants to become a *provider* of EU AI Act compliance services. This research frames the regulation as a market and designs a service business for IW around it: who the buyers are, who the competitors are, what IW should sell, at what price, and with what go-to-market plan leveraging IW AI Core.

## Why this research

### Objectives

The primary question this research answers:

How can Innovation Ways become a *provider* of EU AI Act compliance services — what is the market, who are the competitors, what should IW sell, at what price, and with what go-to-market plan leveraging IW AI Core?

Supporting objectives:

- Size the addressable market and characterize its growth and segmentation.
- Map the competitive landscape and locate any structural gaps.
- Define a service portfolio, pricing, build-vs-partner boundaries, and target segments.
- Lay out a phased go-to-market plan anchored to the enforcement timeline.

### Scope

This document covers the **market and the GTM plan for IW** — market sizing, competitor positioning, service design, pricing, and sequencing. The regulatory *how-to* (what each article requires and how to satisfy it) lives in the sibling documents [R-00154](#)–[R-00156](#).

---

**IW** Innovation Ways

CHAPTER 03

# Background & Context

## CHAPTER 03

# Background & Context

---

Document 4 of the suite — the commercial counterpart to the compliance content in [R-00154](#)–[R-00156](#). It treats the regulation as a market and designs a service business for IW around it.

**What IW AI Core is.** IW AI Core is IW's AI orchestration platform: it schedules LLM agents in git worktrees, generates documentation and research, ingests evidence and audit trails, runs test and quality gates, generates diagrams, and polls for changes via its daemon. These capabilities map closely onto the artifacts the EU AI Act requires, which is the foundation of IW's potential cost advantage as a service provider.

**The regulation as a market.** The EU AI Act creates recurring, deadline-driven demand for compliance work across transparency (Article 50), high-risk obligations (Annex III), AI literacy (Article 4), and management-system certification (ISO 42001). Each obligation is a product-market-fit window.

This document is *not legal or investment advice; market figures are wide-ranged estimates* and should be treated as ranges, not forecasts. Where this research links to sibling documents it uses `[[R-NNNNN]]` references.

---

**IW** Innovation Ways

CHAPTER 04

# Methodology

## CHAPTER 04

# Methodology

---

This research synthesizes secondary market-research sources rather than primary data collection. Sources fall into three buckets:

- **Analyst and market-sizing reports** (e.g., Dimension Market Research, Grand View, Gartner via Nemko) for total addressable market and growth rates.
- **Vendor comparison sites and pricing aggregators** (e.g., governance-platform comparisons, cost-statistics aggregators) for competitor positioning and pricing, since incumbent pricing is largely non-public.
- **Law firms and regulatory primary sources** (e.g., Gibson Dunn, Latham & Watkins, the AI Act Explorer) for the enforcement timeline and obligation detail.

Confidence is tagged on a three-point scale: **HIGH** (multiple credible sources converge), **MEDIUM** (direction is supported but magnitude or specifics vary), **LOW** (single or weak source / speculative). Market figures in particular are **wide-ranged estimates** that diverge by up to ~10× across sources by scope and methodology; they are presented as ranges and anchored to conservative floors wherever possible.

---

**IW** Innovation Ways

CHAPTER 05

# Findings

## CHAPTER 05

# Findings

---

Estimates converge on size and growth but diverge ~10× by scope: [Dimension Market Research](#) puts EU-AI-Act compliance solutions at **\$609M (2026) → \$10.5B (2035), 37.3% CAGR**; [Grand View](#) tracks AI governance at \$418M (2026) → \$3.6B (2033); [Gartner](#) (most conservative) sees platform spend \$492M (2026) → \$1B (2030); an [EU high-risk analysis](#) models €3.4B base case (range €7.6–38B) from ~65,000 high-risk systems at ~€52K/yr each. **60%+ of EU SMEs haven't begun compliance** and are priced out of incumbent platforms ([aicomplibot](#)). *IW should model against the consulting + tooling pools, not headline totals.*

**F1 — The market is large, fast-growing, and underserved at the SME layer [HIGH on direction, MEDIUM on magnitude]**

**F2 — The enforcement ladder creates sequential product windows [HIGH]**

Each deadline is a product-market-fit window: Art. 4 literacy (live), GPAI (live), **Art. 50 transparency (2 Aug 2026 — immediate)**, Annex III high-risk (2 Dec 2027 — high value), Annex I embedded (2 Aug 2028) ([implementation timeline](#), [Gibson Dunn](#)). The Omnibus's 18-month high-risk extension is an *opportunity*: runway to build/sell readiness while urgency persists (high-risk programs take 6–18 months). See timeline detail in [R-00154](#).

**F3 — Three buyer urgency tiers; the SME high-risk deployer is most underserved [HIGH]**

**Tier A (Art. 50, Aug 2026):** anyone with a chatbot/generative feature touching EU users — broadest reach, €5–30K/engagement, includes US firms via the [Brussels effect](#). **Tier B (high-risk, Dec 2027):** HR/credit/insurance/health/biometrics — most valuable (~€52K/yr/system; €200–600K setup providers, €20–50K deployers; [~40% outsource](#)). **Tier C (ISO 42001):** maturity signal, €20–60K. The underserved sweet spot is **Tier-B SMEs**, especially *deployers* (lower complexity, faster to close) ([AI Policy Bulletin](#)).

**F4 — The competitor map has a clear mid-market/SME gap [HIGH]**

**Why:** IW's entire strategy rests on where it sits relative to incumbents — the quadrant makes the open lane visible.

Figure 1. Positioning of AI-compliance providers. The upper-left — automation-driven delivery aimed at SMEs — is largely open; that is IW's target lane (source: vendor analysis incl. [Holistic AI \\$8M ARR, governance platforms comparison](#)). Positioning is illustrative, not a verdict.

Four categories, none serving SME compliance well: **enterprise SaaS** (Credo AI \$75–250K, Holistic AI \$40–400K, OneTrust \$80–300K, IBM \$100K+); **GRC-extension tools** (Vanta, Drata \$15–75K, Scrut \$15K — checklist depth, not technical AI files); **Big-4** (€150–500K+ human-hours mandates; [EPC virtual CAIO from \\$5K/mo](#)); **notified/certification bodies** (TÜV, BSI — €25–50K audits, **legally barred from consulting**). The gap: *no affordable, automation-first, audit-ready service for SMEs at €15–50K/system*.

#### F5 — Article 50 is specific, automatable, and immediately monetizable [HIGH]

The four Art. 50 duties (interaction disclosure, machine-readable marking, biometric/emotion notice, deepfake labelling) are concrete and deliverable as a fixed-scope 2–4 week engagement ([Art. 50 guide](#)). Marking converges on **C2PA (ISO 21694) + watermarking** ([C2PA + AI Act, watermarking guide](#)). This is IW's ideal **lead-generation product** given the Aug 2026 deadline. Implementation detail in [R-00155](#) F8.

**F6 — High-risk programs are where the revenue concentrates [HIGH]**

Annex III high-risk (Dec 2027) carries €200–600K provider setup / €80–150K annual; deployers €20–50K setup ([Ovidiu Suciu](#)). Largest cost lines: QMS (~€71K/yr), post-market monitoring, technical documentation, conformity assessment. The **9–24 month notified-body queue** drives demand for pre-audit preparation.

**F7 — The notified-body gap forces a partner (not compete) structure [MEDIUM]**

Notified bodies are scarce (only a few member states fully designated; 9–24 month queues) and **legally cannot consult** ([eyreACT](#)). This defines IW's boundary: **prepare clients for audit, then hand off** to TÜV/BSI/DNV. ISO 42001 differs — consultants may prepare clients freely; it overlaps 8 core Act articles and is an emerging B2B trust signal ([BSI ISO 42001](#)).

**F8 — IW AI Core's capabilities map directly onto required artifacts [HIGH]**

**Why:** this mapping is the crux of IW's cost advantage — the platform *already* generates what compliance demands.

Figure 2. IW AI Core components mapped to EU AI Act artifact requirements — the basis for delivering compliance as a platform-backed managed service rather than human-hours consulting (source: this analysis; platform per repo CLAUDE.md).

This structural advantage should support pricing **40–70% below Big-4** at 50–80% gross margins ([Software Seni cost models](#)).

**F9 — "AI tool selling AI compliance" is a differentiator, with managed liability [MEDIUM]**

Operating IW AI Core under governance discipline gives IW *firsthand* experience with the exact artifacts — more credible than report-only consultancies. "Eat your own cooking": document IW AI Core's own compliance as a reference case. Manage liability: obtain **explicit AI-advisory PI insurance** (the market is nascent — [Lloyd's/Armilla from May 2025](#), with some PI policies adding AI exclusions), scope deliverables as professional preparation (not guaranteed conformity), and partner a law firm for legal opinions.

**F10 — There is an 18–24 month first-mover window [HIGH]**

Now is the most accessible phase: urgency high, incumbents not yet SME-organized, framework concrete. Within 18–24 months notified bodies mature, SaaS vendors add SME tiers, and Big-4 productize ([eyreACT](#)). Early movers who build a client roster and methodology IP win **high-switching-cost retainers** as clients hit the 2027 deadlines.

**Recommended service portfolio**

| # | Service                              | Trigger               | Price                                    | Notes                                                   |
|---|--------------------------------------|-----------------------|------------------------------------------|---------------------------------------------------------|
| 1 | AI inventory & classification        | every client (anchor) | €3–8K + €1.5–3K/yr                       | gates all other work; maintained register in IW AI Core |
| 2 | <b>Article 50 readiness</b>          | Aug 2026 (immediate)  | €5–20K, 2–4 wks                          | lead-gen product                                        |
| 3 | High-risk compliance program         | Dec 2027              | €35–80K (deployer) / €60–130K (provider) | modular (gap, tech docs, QMS, testing, pre-audit)       |
| 4 | AI literacy training                 | Art. 4 (live)         | €800–2,500/seat or €5–15K site           | productized e-learning + evidence                       |
| 5 | ISO 42001 readiness                  | 2027+                 | €15–50K                                  | prepare + refer to certifier                            |
| 6 | <b>Managed compliance (retainer)</b> | ongoing               | €1.5–5K/mo                               | the ARR engine — convert every client                   |

**Build vs partner**

- **Build (on IW AI Core):** technical-doc generation/versioning, evidence/audit trail, test-evidence, inventory registry, literacy content, regulatory-change monitoring.
- **Partner:** legal opinions (EU AI law firm), quantitative bias testing (Holistic AI / academic lab), conformity assessment & ISO 42001 audits (TÜV/BSI/DNV), AI-advisory PI insurance.
- **Don't build:** an enterprise-scale governance SaaS, your own notified-body accreditation, in-house ML bias-testing infra.

## Phased go-to-market

**Why:** the plan's sequencing mirrors the enforcement ladder — monetize the imminent deadline first, fund the build-out, then compound via retainers.

Figure 3. Phased GTM aligned to the enforcement ladder: land on Article 50, expand to high-risk, compound on retainers (source: this plan).

**Illustrative Year-2 run-rate** (assumes 2–3 FTE in Y1 → 5–6 in Y2):

| Service line                | Units | Unit price | Annual         |
|-----------------------------|-------|------------|----------------|
| Art. 50 packages            | 40/yr | €10K       | €400K          |
| High-risk programs          | 15/yr | €70K       | €1.05M         |
| Retainers (by end Y2)       | 30    | €30K/yr    | €900K          |
| AI literacy (site licenses) | 20    | €8K/yr     | €160K          |
| ISO 42001 readiness         | 5/yr  | €30K       | €150K          |
| <b>Total</b>                |       |            | <b>~€2.66M</b> |

Figure 4. Illustrative Year-2 revenue model — directional, not a forecast; depends on staffing and conversion.

## Target segments

- **Primary:** EU SMEs (50–500 staff) in HR-tech, fintech/lending, healthtech, and AI-feature SaaS — both Art. 50 (now) and high-risk (2027) needs.

- **Secondary:** US SaaS with EU users (Brussels effect, often no EU compliance partner).
  - **Tertiary:** law/accountancy/consulting firms lacking technical delivery — channel partners.
-

**IW** Innovation Ways

CHAPTER 06

# Analysis / Discussion

## CHAPTER 06

## Analysis / Discussion

---

The findings converge on a single structural opening. The market is large and compounding (F1), but every incumbent category — enterprise SaaS, GRC-extension tools, Big-4, and notified bodies — is either priced for enterprises or legally barred from consulting (F4), while 60%+ of EU SMEs have not started and are precisely the deployers with the lowest delivery complexity (F3). That mismatch between where the demand sits (Tier-B SME deployers) and where the supply is aimed (enterprises) is the gap. IW's structural cost advantage closes it: because IW AI Core already produces the technical documentation, audit trails, test/quality-gate evidence, diagrams, and regulatory monitoring that the Act requires (F8), IW can deliver automation-first, audit-ready service at 40–70% below Big-4 cost — pricing that the SME segment can actually absorb, with the credibility of "eating its own cooking" (F9).

The enforcement ladder turns this advantage into a sequence rather than a single bet, and the 18–24 month first-mover window (F10) sets the clock. Article 50's August 2026 deadline is specific and automatable (F5), making it the natural land motion — broad reach, fixed scope, immediate urgency. High-risk programs (F6) are where revenue concentrates, so the expand motion follows clients into 2027, with the notified-body scarcity forcing a prepare-then-hand-off partner structure rather than competition (F7). Managed-compliance retainers then convert one-off projects into high-switching-cost ARR before incumbents reorganize for SMEs. The logic is land (Article 50) → expand (high-risk) → retain (retainers): each stage funds the next and deepens the client relationship while the window is open.

---

**IW** Innovation Ways

CHAPTER 07

# Conclusion

## CHAPTER 07

# Conclusion

---

Innovation Ways can become an EU AI Act compliance-service provider by selling automation-first, audit-ready compliance to underserved SMEs — landing on the August 2026 Article 50 deadline, expanding into high-risk programs through 2027, and converting clients to managed-compliance retainers — using IW AI Core to deliver the Act's required artifacts at a fraction of incumbent cost. The plan works because the three pieces reinforce each other: a market that is large, compounding, and structurally underserved at the SME layer; a platform that already generates what compliance demands, giving IW a durable cost and credibility edge; and an enforcement ladder that sequences the work so each deadline funds the next while a closing 18–24 month window keeps the lane open. The "so what" is that this is a time-boxed opportunity, not an evergreen one: moving now to build a client roster and methodology IP secures high-switching-cost retainers before notified bodies mature, SaaS vendors add SME tiers, and the Big-4 productize. Acting late forfeits the very advantage that makes the play viable.

CHAPTER 08

# Recommendations (prioritized)

## CHAPTER 08

# Recommendations (prioritized)

---

1. **[Immediate]** Launch **Article 50 readiness** as a fixed-price service — hard Aug 2026 deadline, 2–4 week delivery, minimal new investment.
  2. **[Immediate]** Document **IW AI Core's own** compliance as a reference case (IW is itself a deployer — Arts. 4/50 likely apply).
  3. **[30 days]** Obtain **AI-advisory PI insurance**; scope deliverables as professional preparation, not guarantees.
  4. **[60 days]** Sign **one EU AI law-firm partner** for legal-opinion components.
  5. **[Q3 2026]** Establish a **notified-body referral** agreement (TÜV SÜD / BSI).
  6. **[Q3 2026]** **Publish transparent pricing** for Service Lines 1, 2, 4 — differentiates from enterprise-only no-price vendors.
  7. **[Q4 2026–Q1 2027]** Launch high-risk programs, **deployers first** (HR-tech, fintech).
  8. **[Q1 2027]** **Convert every project client to a retainer** — ARR is where value compounds.
  9. **[Q2 2027]** Pick a **vertical** (HR-tech or fintech) to template delivery and build referenceable case studies.
  10. **[Year 2]** Evaluate **white-labeling** IW AI Core's compliance generation to other boutiques (channel multiplier).
-

**IW** Innovation Ways

CHAPTER 09

# Limitations

## CHAPTER 09

# Limitations

---

- Market figures span ~100× by 2030 across sources with differing scope/methodology; treat as ranges. €609M (2026) and Gartner \$1B (2030) are the conservative anchors.
- Cost benchmarks are modeled estimates, not empirical spend surveys; vendor pricing is largely non-public (from third-party comparison sites).
- The Digital Omnibus was not yet OJ-published at research date — provisions politically agreed, not formally in force.
- This document is **not legal or investment advice**; obligations and interpretation continue to evolve.

### Risks & unknowns

- **Regulatory instability [HIGH]** — already amended once (Omnibus); guidance still emerging. *Mitigation:* make change-monitoring part of the retainer value; date all deliverables.
  - **PI insurance gap [HIGH]** — AI advisory coverage is nascent; secure explicit cover and tight engagement letters.
  - **Credibility of AI-generated compliance docs [MEDIUM]** — always human-review and sign off; position platform as the backbone, not an auto-certifier.
  - **Delivery-capacity bottleneck [MEDIUM]** — needs ≥1 qualified AI-compliance professional to review outputs in Y1.
  - **Wide market estimates [MEDIUM]** — don't pitch the €38B ceiling uncaveated; use €609M (2026) / Gartner \$1B (2030) as defensible floors.
  - **Notified-body saturation [MEDIUM]** — set realistic client timelines; favour deployer clients who can self-certify some system types.
  - **IW's own exposure [LOW-MEDIUM]** — IW must get its own Arts. 4/50/26 house in order before advising others.
-

**IW** Innovation Ways
